USE CASES 9

We deliver practical, impactful solutions for healthcare providers and emergency responders.

CLIENTS, GRANTS & PARTNERSHIPS 10

We have wide range of clients, grants and partnerships.

Speak and be heard

*"The limits of my
language mean the
limits of my world."
— Ludwig Wittgenstein.*

We make global communication effortless by delivering instant audio, video and text translation, and real-time multilingual teleconferencing in more than 120 languages. Every conversation, video, document, or broadcast lands with clarity and impact, no matter where your audience is.

BUSINESS OVERVIEW

VideoTranslator's SaaS platform breaks language barriers with on-the-fly text translation and live multilingual teleconferences, giving you instant reach to audiences everywhere.

ABOUT US

VideoTranslatorAI Pty Ltd (ABN 73 602 663 141) is a Sydney-based media-technology company dedicated to removing language barriers for global teams. Our SaaS platform fuses real-time transcription, translation, and voice synthesis to power multilingual teleconferences and friction-free localisation. With 120+ languages, we help organisations communicate seamlessly and amplify the ROI of every international interaction.

OUR WHY

VideoTranslatorAI was born in 2021, when our founding team's discussions with doctors in multilingual India revealed how a single mistranslation can endanger lives. Having witnessed the high stakes of language barriers, we united around one mission: to build a platform that delivers accurate, real-time communication at scale so critical information is never lost in translation.

OUR MISSION

We equip businesses, government agencies, and individuals with AI-driven language tools that make multilingual communication effortless. By tearing down language barriers, we turn global collaboration into a seamless, accessible experience for everyone.

PRODUCT OVERVIEW

Speak freely in any language—our AI platform instantly translates and dubs every video conference, making global collaboration effortless.

VideoTranslatorAI delivers instant multilingual conversation across in-person discussions, video calls, and live broadcasts. From a quick in-person chat or small group call in multiple languages, to an interactive, worldwide webinar with numerous languages, participants can hear and speak naturally without extra software or configuration.

Flexible controls give hosts full command of the conversation flow, while the AI handles the heavy language work in the background. Backed by custom glossaries, fragments and grammar, our solution ensures every word is clear and accurate, however large the audience or diverse the languages.

Our platform enables seamless communication in calls, broadcasts, and meetings, letting users speak naturally and be understood without extra setup.

PRODUCT OVERVIEW

Effortlessly break language barriers with our AI-powered platform, offering real-time translation and dubbing for video conferences.

MULTILINGUAL IN PERSON

Our platform simplifies face-to-face conversations between two people who speak different languages by using a single moderator device to transcribe, translate, and voice responses with no extra apps needed from the client.

Ideal for quick chats or professional meetings, this setup mimics consecutive interpretation so each speaker can talk naturally and be understood. Just place the device between participants, and the platform handles the rest, making multilingual in-person discussions smooth and efficient.

MULTILINGUAL VIDEO CALLS

Our platform enables real-time multilingual video calls by transcribing, translating, and voicing each participant's speech, mimicking consecutive interpreting. Ideal for small groups of 2 to 6 people, each participant uses their own device to engage in seamless multilingual conversations.

Speech is captured through each user's microphone, instantly transcribed, translated into their chosen language, and delivered via a synthesised voice. This setup is perfect for interactive meetings like team check-ins or client updates, making language barriers virtually invisible and communication smooth.

MULTILINGUAL BROADCAST

Our platform enables large-scale multilingual broadcasts by transcribing, translating, and voicing over moderators' speech in real time. It's ideal for webinars, corporate announcements, and educational events, allowing audiences of 10 or more to follow along in their preferred language.

Moderators maintain full control over who can speak and when, with the ability to mute participants and toggle translation or voiceover features as needed. This setup ensures a smooth, focused presentation and supports interactive Q&A sessions without language barriers or disruptions.

KEY FEATURES

Effortlessly break language barriers with our AI-powered platform, offering real-time translation and dubbing for video conferences.

CONFERENCE CALL

VideoTranslatorAI's Conference Call Translation enables real-time transcription, translation, and AI voiceovers for each speaker, replicating the feel of live interpretation without interruptions.

With role-based controls, built-in dictionaries for brand and industry terms, and secure downloadable logs, the platform ensures smooth multilingual communication in conference calls. This allows moderators to manage the flow and participants to engage naturally in their preferred language.

CUSTOM GLOSSARIES

VideoTranslatorAI's platform offers flexible custom glossaries that ensure accurate transcription, translation, and voiceovers for brand names, industry terms, and specialised phrases.

By referencing these glossaries, the AI can deliver more precise results, even when dealing with complex or niche vocabulary.

This helps maintain consistency and authenticity across different languages and contexts. Custom glossaries can be tailored to specific scenarios, making them a powerful tool for any organisation's linguistic needs.

HYBRID TRANSLATION

VideoTranslatorAI's text translation workflow offers flexible, template-based configurations that support both AI and human-in-the-loop processes with customisable grammar rules and nested fields. These workflows can be triggered via UI or API, allowing seamless integration into existing systems for scalable, accurate localisation.

Each template can be tailored to specific languages or dialects, with options for fragment-based translation and prefilled terms to ensure brand consistency and cost-efficient processing.

CUSTOM GRAMMAR

VideoTranslatorAI's Custom Grammar solution empowers organisations to enforce consistent tone, style, and compliance by defining custom linguistic rules across all translations.

Supporting both suggestion-based and forced edits, it integrates seamlessly into translation workflows to maintain brand integrity and reduce manual review.

With a user-friendly interface and real-time updates, teams can instantly apply or adjust grammar rules, ensuring accuracy, efficiency, and global consistency across all content.

KEY FEATURES

PREFILLED FRAGMENTS

VideoTranslatorAI's Prefilled Fragments feature allows users to store and reuse pre-translated text sections, reducing redundancy in large-scale translation jobs. By referencing these pretranslated segments during AI-based workflows, organisations can save on costs while ensuring consistent, accurate translations.

Fragments are fully customizable text projects that tie into any text template, providing flexibility and structure for diverse needs. When paired with hybrid approaches, Prefilled Fragments streamline the overall translation process and enhance quality control.

OUR SOLUTIONS

VideoTranslator builds AI solutions based on the ensemble method, wherein multiple AI's are chained together with business logic , delivering specific outcomes for our clients.

ENTERPRISE

VideoTranslatorAI provides a comprehensive set of enterprise solutions for real-time multilingual communication and large-scale text translation workflows. These solutions are designed to replicate the effectiveness of human interpreters, while also accommodating human-AI hybrid processes.

We also offer enhanced enterprise-focused capabilities, enabling organizations to manage costs effectively, customize branding, store recordings automatically, and fine-tune AI models per language or dialect. These features ensure both flexibility and consistency across large-scale, multilingual operations.

Role-based controls for moderators, linguists, and participants empower organizations to tailor translations at every level. Completed translations are delivered seamlessly through both UI and API, ensuring full flexibility and scalability. By tailoring the platform to specific usage patterns, enterprises can maximize ROI while preserving brand integrity. From seamless integration to selective AI enforcement, every aspect is designed to scale and adapt to diverse corporate needs.

OUR SOLUTIONS

SME'S & STARTUPS

VideoTranslatorAI empowers SMEs and startups with cost-effective, on-demand multilingual communication tools that support global collaboration, customer engagement, and scalable growth.

Designed for agility, the platform offers real-time translation and voiceover for video calls, in-person meetings, and broadcasts—using just a mobile device. Flexible pricing, role-based controls, and minimal setup make it ideal for small teams needing clarity in multilingual legal, medical, or business settings.

For document translation, templated workflows, prefilled fragments, and custom dictionaries allow users to combine AI and human translation for consistent, high-quality output. Seamless API integration with tools like Google Sheets ensures simple, scalable localisation tailored to fast-growing ventures.

EDUCATION & TRAINING

VideoTranslatorAI offers multilingual solutions tailored for the education and training sector, enabling real-time interpretation, hybrid text translation, and broader access to learning for non-English-speaking communities. Through live multilingual video sessions, educators can engage with diverse learners as if a classroom interpreter were present—translating speech in real time and supporting collaborative learning.

For written content, the platform enables scalable translation of curricula, training modules, and administrative documents, combining AI speed with human oversight where needed. Custom dictionaries and grammar rules maintain educational consistency, while the platform's cultural competency tools support sensitive and equitable teaching.

By bridging language gaps and respecting cultural contexts, VideoTranslatorAI helps schools and training providers foster global collaboration, boost student engagement, and expand access to high-quality learning experiences for multilingual audiences.

OUR SOLUTIONS

EMERGENCY SERVICES

VideoTranslatorAI equips emergency services with real-time multilingual communication and hybrid translation workflows to overcome language barriers during critical incidents.

Through live video calls with AI-powered transcription, translation, and voiceover, responders can effectively engage non-English-speaking individuals in urgent scenarios.

Beyond live interpretation, the platform enables fast and precise translation of protocols, reports, and safety materials using custom grammar rules, dictionaries, and nested templates to preserve vital information.

By enhancing cultural competency and expanding access to emergency updates, VideoTranslatorAI helps emergency services respond faster, build public trust, and improve safety outcomes for diverse communities.

HEALTHCARE

VideoTranslatorAI delivers comprehensive multilingual solutions designed to address the unique communication challenges within the healthcare industry. Our platform supports real-time interpretation for telehealth sessions, in-person consultations, and large broadcast events, mirroring the experience of having a live medical interpreter.

In addition to these on-the-spot services, we offer powerful hybrid text translation workflows suited to any scale or specialty. This ensures that written materials, from patient intake forms to complex medical documents, are accurately translated. With features like template-based workflows, custom dictionaries, and EMR integration, healthcare professionals can deliver timely, compliant language support.

This empowers health providers to create accessible educational content, boost health literacy, and improve adherence to treatment plans. By fostering clear, inclusive communication, VideoTranslatorAI enhances patient outcomes and supports more efficient, equitable care delivery.

USE CASES

HEALTHCARE COMMUNICATIONS

Revolutionise multilingual healthcare with our video call platform for in-person and telehealth care. Empower providers to connect, engage, and educate diverse patient populations with cutting-edge translation and broadcast capabilities.

IN PERSON & TELEHEALTH

Our platform enables providers to communicate effectively with clients across linguistic barriers through multilingual video calls, combining in-person and telehealth functionalities for accurate, real-time interpretation in clinical settings that enhance patient trust, reduce misunderstandings, and streamline administrative tasks.

HEALTH AWARENESS

Our platform's video call and broadcast capabilities help organizations raise awareness of vital health information in multiple languages, building trust and improving engagement and outcomes. With an advanced API-driven workflow, healthcare providers can scale messaging across audio, video, and text for efficient content distribution.

Our hybrid translation model combines AI with human expertise for optimal accuracy and cultural relevance. This ensures healthcare providers can effectively reach diverse communities with the right message at the right time.

EMERGENCY COMMUNICATIONS

Empower your teams with real-time, multilingual communication tools. Strengthen cultural competency in your organisation and boost disaster literacy in your community across every interaction.

ORGANISATIONAL CULTURAL COMPETENCY

Developing robust cultural competency is critical for organisations serving diverse communities. We bridge language gap by providing real-time video call and in-person multilingual solutions directly to mobile devices. We support over 120 languages and dialects, ensuring that cultural nuances and communication barriers never hinder quality care.

ENABLING EMERGENCY & DISASTER LITERACY

VideoTranslatorAI goes beyond cultural competency by boosting disaster literacy through powerful Content and Language Operations (ContentOps and LangOps) solutions. From translating awareness materials to deploying real-time emergency broadcasts, our platform ensures critical information reaches diverse communities swiftly and clearly.

With customisable translation pipelines and advanced grammar processing, even volunteer-generated content becomes professional, clear, and ready for deployment—helping organizations respond effectively when every second counts.

Combining AI's speed with human expertise will democratise communication across borders. AI does the heavy lifting; humans fine-tune the soul.
